

Accelerated Math Program

GRADES 4 & 5

At Pinewood Preparatory School, we are committed to meeting students' needs by focusing on individual strengths to achieve academic success. Our Accelerated Math Program, offered in 4th and 5th grades, provides a more rigorous curriculum for students ready to explore advanced mathematical concepts.

Selection for the Accelerated Math Program is based on teacher recommendations and standardized math scores. If a student is selected, parents may choose for their child not to participate. Each accelerated section is limited to 18 students to ensure personalized attention.

This program goes beyond the solid foundation of the Saxon Math curriculum by introducing abstract mathematics and providing additional opportunities to apply mathematical concepts to real-world situations through a variety of performance tasks. By adjusting the pacing, students in the accelerated track can fully develop their analytical skills and explore multiple strategies for problem-solving.

Students in the regular math classes continue to benefit from lessons tailored to their strengths and needs, gaining confidence and building their skills through personalized instruction. Regardless of track, all Pinewood students receive exceptional math instruction and guidance, preparing them for continued success in mathematics.
